Being Green Is Good for Business

Many companies are finding out that it pays to be green. The journal *Consulting to Management (December 2002)* quoted survey findings by S.C. Johnson & Sons that at least 25% of the US population is willing to link their buying decision to a company's environmental performance. The journal story also pointed out that companies are looking "beyond regulatory compliance and social responsibility to develop environmental initiatives that increase their competitive standing by reducing costs or increasing profits."

MXI clients are developing environmental initiatives, and we are contributing to their success with our fully integrated ethanol recycling facility, and our programs to bulk waste and recycle the associated packaging. Our clients have found that outsourcing their waste consolidation, recycling and disposal to MXI has not only helped them develop environmentally friendly initiatives, but it has contributed to their bottom line.

With our tailored service and competitive pricing, we ensure that our clients don't have to spend any more money than is essential on environmentally compliant waste recycling and disposal.

Our knowledgeable staff, which includes a Certified Hazardous Materials Manager, can help you determine the most cost effective and environmentally friendly way to treat and dispose of waste streams.

With the opening of our new state-of-the-art Materials Recovery Facility, MXI can now process double the tonnage of its previous facility. This means that customers' waste in bulk, drums, cartons and palletized loads are handled more efficiently.

We also have 10-day transfer permits that allow us to hold hazardous waste in transit for 10 days at our Piscataway, NJ, Abingdon, VA, Sumter SC, and Fontana, CA facilities. We can transport truckloads and less than truckload quantities of hazardous and non-hazardous waste on company-owned trucks.

THINKING OF THE
ENVIRONMENT FIRST.

In times of fly-by-night, it is obvious your company is in the industry for the long haul." - Ralph Duca, Vice President, Clean Water of NY, Inc.

Customer Testimonials

"I just want to take the opportunity to commend the job that the Abingdon MXI team is doing for Appalachian Environmental. I feel you are my preferred partner to explore all of my waste opportunities with. We have worked creatively together this past year for MXI to be considered my preferred partner. Joey, Peggy, Scott and John are very professional and work hard to help support my sales efforts. At times, they probably consider me a customer that demands a lot of time; however, I think our record on customer satisfaction is showing that the time is well spent... I appreciate each of their efforts."

Guy Meade, President, Appalachian Environmental

"I am writing to compliment MXI on the outstanding service that we have received over the past five years. MXI has represented Rineco well by arriving at our customers with well-maintained equipment and knowledgeable drivers. The service failures are minimal and have been addressed immediately....I look forward to doing business with MXI into the future."

Sarita Davis, Director of Transportation, Rineco

"Clean Water would like to take this opportunity to express its gratitude to you and your staff. The professional and efficient manner in which your organization is run is both a pleasure and an economic benefit to Clean Water. In the time of fly-by-night operations, it is obvious that your company is in the industry for the long haul! ... Thank you for all your help.

Ralph Duca, Vice President, Clean Water of NY, Inc.

MXI Opens State-of-the-Art MRF And ATF Redistillation Facility

MXI has made a significant investment in this state-of-the-art facility.

MXI Environmental Services has opened its new 24,000-sq. ft. Permit by Rule Materials Recovery Facility (MRF) at 26319 Old Trail Road, Abingdon, VA.

The 11.5-acre site is gated and completely enclosed. The facility also has state-of-the-art containment for accidental releases. The MRF is capable of handling 200 tons of waste that can be received as bulk or in drums, cartons, or palletized loads.

MXI also holds a license from the Bureau of Alcohol Tobacco & Firearms (ATF) to operate a distillation column for ethanol. This column allows for single-stop service for all generators who need waste ethanol recycled including bulk and drummed waste. When combined with our Decontainerization equipment, MXI can recover ethanol from consumer-packaged goods.

“Opening this facility represents a significant commitment by MXI to providing its customers with a single source for waste transportation and disposal,” says Ron Potter, MXI’s president. “Our customers have asked for and appreciate this convenience.”

“We assume management of the waste once we receive it and the customer’s involvement stops,” says Scott Shaw, Operations Manager. “Many other firms can’t offer this.”

*MXI has the equipment
and manpower
required to do the job.*

About MXI's Solidification Process

MXI has developed a range of equipment to bulk and/or solidify waste materials at its MRF.

Bulking is accomplished utilizing various types of Decontainerization equipment. This is supplemented as appropriate by breakdown and recycling of packed materials.

Solidification is achieved using both Bulking areas and a specialized Blending machine.

This combination of specialized equipment allows MXI to bulk both hazardous and non-hazardous materials. Disposal is accomplished utilizing fully licensed TSDFs, Incinerators, and Subtitle D Landfills.

THINKING OF THE
ENVIRONMENT FIRST.

*MXI will manage your
Disposal of Hazardous
Waste*

About MXI's Hazardous Waste Capability

MXI is a fully permitted Transporter and Broker for both the transportation and disposal of all types of hazardous waste. MXI will identify and properly classify waste, manage the disposal process and fully document the process, arrange for cost effective disposal and provide transportation for all types of hazardous waste.

MXI has secured facility based disposal agreements with industry leading TSDFs utilizing the A901 issued to it by the State of New Jersey.

Utilizing both our transportation and disposal capabilities, MXI can deal with Lab Packed, Drummed, Palletized and Bulk Hazardous Waste Streams. In addition, utilizing MXI's 10-day Hazardous Waste Transfer locations in New Jersey, Virginia and California, MXI can consolidate and bulk hazardous waste.

MXI will meet with its clients to review the disposal options and suggest the most cost-effective disposal arrangements. MXI will prepare all documentation, schedule pickup and delivery, and resolve all disposal issues.
